* Many thanks to Mert Akan for excellent research assistance.
Source of Data and Citation

• **Source of all data (unless noted):** Survey of Working Arrangements and Attitudes (SWAA), see [www.wfhresearch.com](http://www.wfhresearch.com)

• **When referring to these results please cite:**

[www.wfhresearch.com](http://www.wfhresearch.com)
The Survey of Working Arrangements and Attitudes

• Monthly online survey since May 2020, >200,000 observations to date.
• We design the survey instrument.
• **Target population**: U.S. residents, 20-64, who earned $\geq 10K$ in 2019 ($\geq 20K$ in early survey waves). From January to March 2022, we transitioned to earned $\geq 10K$ in the prior year. As of July 2023, we also now developed a dataset for 2022 and later that does not impose an earnings requirement.

• The SWAA is fielded by market research firms that rely on wholesale aggregators (e.g., Lucid) for lists of potential survey participants.

• After dropping “speeders” (~16% of sample), we re-weight to match 2010-2019 CPS worker shares in age-sex-education-earnings cells. Dropping those who fail attention checks (roughly another 12%) sharpens some results.

• Median response time: 7 to 12 minutes, after dropping speeders

• Results, micro data, survey instruments, and more are freely available at www.WFHresearch.com.
Representativeness

• By design, we focus on persons who exhibit some attachment to the workforce, as evidenced by prior earnings. When noted, some results using 2022 and later data do not impose an earnings requirement.

• No respondents are recruited based on an interest in our topics.

• Since respondents take the survey using a computer, smartphone, iPad or like device, we miss people who never use such devices.

• Before re-weighting, the SWAA under samples the less educated, particularly those who did not finish high school.

• Even after re-weighting, we may over sample those who are more tech and internet savvy, especially among the least educated.
About 28% of Paid Days in the US in February 2024 Were Work-From-Home Days

Source: Responses to the questions:
- **Currently (this week)** what is your work status? (SWAA)
- For each day last week, did you work a full day *(6 or more hours)*, and if so where? (SWAA)
- In the last 7 days, have you...teleworked or worked from home? (HHP)

Notes: For each wave, we compute the percent of paid full days worked from home in the SWAA and Household Pulse Survey (HHP) and plot it on the vertical axis. The horizontal-axis location shows when the survey was in the field. The pre-COVID figure is from the 2017-2018 American Time Use Survey. SWAA: Before November 2020, we asked the first question above. Since November 2021, we have asked the second question. From November 2020 to October 2021, we back-cast responses to the current question using a regression model based on current-question responses and another question (not shown). We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells. HHP: We focus on individuals aged 20 to 64 with household incomes above $25,000 per year. We assign 30% of days WFH if the respondent did so for “for 1-2 days;” 70% if they did so “for 3-4 days;” 100% if “5 or more days;” and 0 for “No.”

N = 147,412 (SWAA) N = 625,415 (HHP)
The Pandemic Permanently Increased WFH, Equivalent to Almost 40 Years of Pre-Pandemic Growth

Source: Responses to the questions:
- In their time diary the respondent listed the activity “Paid work at home” for 6 or more hours. (AHTUS)
- How did this person usually get to work last week? (ACS)
- For each day last week, did you work a full day (6 or more hours), and, if so, where? (SWAA)

Notes: For each dataset, we compute the percent of working individuals who worked full days at home during the survey’s reference period. For the AHTUS and ACS, if an individual reports usually working from home, we mark them as working from home 100% of the time. In SWAA we compute the percent of full paid days at home to account for a hybrid work schedule. Then we plot each percentage on the vertical axis. We re-weight the sample of US residents aged 20 to 64 earning $20,000 or more in 2019 dollars to overall population shares. We impute the September 2023 data point as the average of August and October due to data quality issues.
Employer Plans for WFH Trend Near 2.2 Days per Week for Persons Able to Work From Home

Responses to the question:
- *Looking one year ahead, how often is your employer planning* for you to work full days at home?

Sample: Data are from all SWAA waves, covering July 2020 to February 2024. The sample includes all respondents who reported their employer's plans for WFH as the pandemic ends (“All workers” series), but the series labeled “Workers able to work from home” restricts attention to workers who have work-from-home experience during the pandemic. In both cases, we exclude respondents who report having no employer. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match Current Population Survey on age, sex, education, and earnings. We impute September 2023 data as the average between August and October due to data quality issues.

N = 205,519 (all respondents) and 148,317 (able to work from home)
The Gap Between How Much Employees Want to Work from Home and Employer Plans Is Stable at About 0.5 Days

Responses to the questions:
- Looking one year ahead, how often would you like to have full paid days at home?
- Looking one year ahead, how often is your employer planning for you to work full days at home?

Sample: Data are from all SWAA waves, covering August 2020 to February 2024. The sample includes all respondents who responded to the relevant survey and have work-from-home experience during the pandemic. For the employer plans series, we exclude respondents who report having no employer. We impute September 2023 data as the average between August and October due to data quality issues.

N = 148,317 (employer plans, able to work from home)
N = 159,380 (worker desires, able to work from home)
Employers Offer Fewer Fully Remote Jobs and More Fully Onsite Jobs Than Employees Want

Responses to the questions: As the pandemic ends, how often would you like to have paid workdays at home? For each day last week, did you work a full day (6 or more hours), and if so where?

Sample: Data are from the November 2023 to February 2024 SWAA waves. The sample includes full-time wage and salary employees (i.e. who worked 5 or more days during the survey reference week) who have work-from-home experience during the pandemic and pass the attention-check questions. Numbers for “5 days per week” in the right chart include responses for 6 or 7 full days worked from home. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match Current Population Survey on age, sex, education, and earnings.
Working from Home is Most Prevalent in the Tech, Finance, and Professional and Business Services Sectors

Current working from home: All wage and salary employees

Responses to the question:
- For each day last week, did you work a full day (6 or more hours), and if so where?

Sample: Data are from the September 2023 to February 2024 SWAA waves. The sample includes all wage and salary employees who pass the attention-check questions. We exclude mining due to insufficient observations and agriculture to focus on non-farm jobs. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match Current Population Survey on age, sex, education, and earnings.

N = 17,396
By Early ‘24: 13% of Full-Time Employees Were Fully Remote, 59% Were Full-Time on Site, and 29% Were in a Hybrid Arrangement

Source: Responses to the questions:
- For each day last week, did you work a full day (6 or more hours), and if so where?

Notes: We compute the percent of full-time (i.e. work 5+ days/week) wage and salary employees who either i) worked all their days on business premises; ii) worked some days on business premises and some days at home; or iii) worked all all days at home during the survey’s reference week. Then we show the percentage for each group. The sample covers the November 2023 to February 2024 waves of the SWAA. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells.

N = 13,012
For Employees that Can Work from Home, the Most Common Practice is Hybrid

Source: Responses to the questions:
- *For each day last week, did you work a full day (6 or more hours), and if so where?*

Notes: We compute the percent of full-time (i.e. work 5+ days/week) wage and salary employees who are able to work from home and either i) worked all their days on business premises; ii) worked some days on business premises and some days at home; or iii) worked all all days at home during the survey’s reference week. Then we show the percentage for each group. We infer that somebody is able to work from home if they currently do so 1+ days per week, or did so at some point since the start of COVID. The sample covers the November 2023 to February 2024 waves of the SWAA. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in 2019 or 2021 to match CPS shares by age-sex-education-earnings cells. 

\[ N = 9,314 \]
Workers In Their 50s and 60s Are Fully Onsite More Often Than Younger Workers

Source: Responses to the questions:
- For each day last week, did you work a full day (6 or more hours), and if so where?

Notes: For each age group, we compute the percent of full-time (i.e. work 5+ days/week) wage and salary employees who either i) worked all their days on business premises; ii) worked some days on business premises and some days at home; or iii) worked all days at home during the survey’s reference week. Then we show the percentage for each group. The sample covers the November 2023 to February 2024 waves of the SWAA. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells.
N = 13,012
Information, Finance & Insurance, and Prof. & Business Services Have The Largest Share of Hybrid and Remote Workers

Source: Responses to the questions:
- For each day last week, did you work a full day (6 or more hours), and if so where?

Notes: For each industry group, we compute the percent of full-time (i.e. work 5+ days/week) wage and salary employees who either i) worked all their days on business premises; ii) worked some days on business premises and some days at home; or iii) worked all all days at home during the survey’s reference week. Then we show the percentage for each group. The sample covers the November 2023 to February 2024 waves of the SWAA. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells. We exclude agriculture, construction, mining, and other personal services, the latter two due to insufficient observations.

N = 12,692
Desired and Actual Work From Home Are Similar Across Respondents Who Differ By Pet Ownership Status

Responses to the questions: “For each day last week, did you work a full day and if so where?” “Looking one year ahead, how often would you like to have paid workdays at home?”

Notes: The figures show the average number of days worked from home in the prior week (left) and the average number of work-from-home days workers would like to have per week one year in the future (right), for categories of workers defined by whether they live with a particular type of pet. The sample includes respondents who worked in the week prior to the survey and participated in the December 2023 or January 2024 waves of the SWAA and pass our attention-check questions. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells. N = 9,206
Friday and Monday are the Most Popular Work-From-Home Days Among Hybrid Workers

Responses to the questions:
- Currently (this week) what is your work status?
- For each day last week, did you work a full day (6 or more hours), and if so where?

Notes: We focus on a sample of full-time hybrid workers (work >5 days in the prior week, with at least one day from home and at least one day on business premises) in the December 2023 to February 2024 SWAA waves. Then we estimate, for each weekday the share of those workers who reported working from home on that day. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells.

N = 3,755
Women Are More Likely Than Men to Say That Fully Remote Work is Best for Their Mental Health

If you worked 5 days/week, how many WFH days/week would be best for your MENTAL health

<table>

Responses to the Question:
- If you worked 5 days per week, how many work-from-home days per week would be best for your mental health?

Notes: The figure shows the distribution of responses to the question above. The sample includes respondents to the January 2024 SWAA who worked for pay in the week prior to the survey. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells. N = 4,177.
Workers Over 50 Are More Likely to Say Fully In-Person Or Fully Remote Work is Ideal for Their Mental Health

Responses to the Question:
- If you worked 5 days per week, how many work-from-home days per week would be best for your mental health?

Notes: The figure shows the distribution of responses to the question above. The sample includes respondents to the January 2024 SWAA who worked for pay in the week prior to the survey. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells. N = 4,177.
Average Number of WFH Days/Week That Workers Say Are Best for Mental Health Correlates With Actual WFH

If you worked 5 days/week, how many WFH days/week would be best for your mental health?

Responses to the Question:
- If you worked 5 days per week, how many work-from-home days per week would be best for your mental health?

Notes: The figure shows the average number of WFH days per week that workers in each industry say are best for their mental health. The sample includes respondents to the January 2024 SWAA who worked for pay in the week prior to the survey. We exclude agriculture, utilities, mining, and other due to small samples in those industries. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells. N = 4,034.
