* Many thanks to Mert Akan for excellent research assistance.
Source of Data and Citation

• **Source of all data (unless noted):** Survey of Working Arrangements and Attitudes (SWAA), see [www.wfhresearch.com](http://www.wfhresearch.com)

• **When referring to these results please cite:**

[www.wfhresearch.com](http://www.wfhresearch.com)
The Survey of Working Arrangements and Attitudes

• Monthly online survey since May 2020, >200,000 observations to date.
• We design the survey instrument.
• Target population: U.S. residents, 20-64, who earned ≥ $10K in 2019 (≥$20K in early survey waves). From January to March 2022, we transitioned to earned ≥ $10K in the prior year. As of July 2023, we also now developed a dataset for 2022 and later that does not impose an earnings requirement.
• The SWAA is fielded by market research firms that rely on wholesale aggregators (e.g., Lucid) for lists of potential survey participants.
• After dropping “speeders” (~16% of sample), we re-weight to match 2010-2019 CPS worker shares in age-sex-education-earnings cells. Dropping those who fail attention checks (roughly another 12%) sharpens some results.
• Median response time: 7 to 12 minutes, after dropping speeders
• Results, micro data, survey instruments, and more are freely available at www.WFHresearch.com.
Representativeness

• By design, we focus on persons who exhibit some attachment to the workforce, as evidenced by prior earnings. When noted, some results using 2022 and later data do not impose an earnings requirement.

• No respondents are recruited based on an interest in our topics.

• Since respondents take the survey using a computer, smartphone, iPad or like device, we miss people who never use such devices.

• Before re-weighting, the SWAA under samples the less educated, particularly those who did not finish high school.

• Even after re-weighting, we may over sample those who are more tech and internet savvy, especially among the least educated.
About 28% of Paid Days in the US in March 2024 Were Work-From-Home Days

Source: Responses to the questions:
- **Currently (this week) what is your work status?** (SWAA)
- **For each day last week, did you work a full day (6 or more hours), and if so where?** (SWAA)
- **In the last 7 days, have you...teleworked or worked from home?** (HHP)

Notes: For each wave, we compute the percent of paid full days worked from home in the SWAA and Household Pulse Survey (HHP) and plot it on the vertical axis. The horizontal-axis location shows when the survey was in the field. The pre-COVID figure is from the 2017-2018 American Time Use Survey. SWAA: Before November 2020, we asked the first question above. Since November 2021, we have asked the second question. From November 2020 to October 2021, we back-cast responses to the current question using a regression model based on current-question responses and another question (not shown). We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells. HHP: We focus on individuals aged 20 to 64 with household incomes above $25,000 per year. We assign 30% of days WFH if the respondent did so for “for 1-2 days;” 70% if they did so “for 3-4 days;” 100% if “5 or more days;” and 0 for “No.”

N = 147,412 (SWAA) N = 625,415 (HHP)
The Pandemic Permanently Increased WFH, Equivalent to Almost 40 Years of Pre-Pandemic Growth

Full Days Worked at Home, Percent of Paid Workdays

Source: Responses to the questions:
- In their time diary the respondent listed the activity “Paid work at home” for 6 or more hours. (AHTUS)
- How did this person usually get to work last week? (ACS)
- For each day last week, did you work a full day (6 or more hours), and, if so, where? (SWAA)

Notes: For each dataset, we compute the percent of working individuals who worked full days at home during the survey’s reference period. For the AHTUS and ACS, if an individual reports usually working from home, we mark them as working from home 100% of the time. In SWAA we compute the percent of full paid days at home to account for a hybrid work schedule. Then we plot each percentage on the vertical axis. We re-weight the sample of US residents aged 20 to 64 earning $20,000 or more in 2019 dollars to overall population shares. We impute the September 2023 data point as the average of August and October due to data quality issues.
Employer Plans for WFH Trend Near 2.2 Days per Week for Persons Able to Work From Home

Responses to the question:
- **Looking one year ahead, how often is your employer planning** for you to work full days at home?

Sample: Data are from all SWAA waves, covering July 2020 to April 2024. The sample includes all respondents who reported their employer’s plans for WFH as the pandemic ends (“All workers” series), but the series labeled “Workers able to work from home” restricts attention to workers who have work-from-home experience during the pandemic. In both cases, we exclude respondents who report having no employer. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match Current Population Survey on age, sex, education, and earnings. We impute September 2023 data as the average between August and October due to data quality issues.

N = 215,906 (all respondents) and 155,505 (able to work from home)
The Gap Between How Much Employees Want to Work from Home and Employer Plans Fluctuates Near 0.5 Days

Average Days per Week Working From Home After the Pandemic Ends: Workers Able to WFH

Responses to the questions:
- **Looking one year ahead, how often would you like to have full paid days at home?**
- **Looking one year ahead, how often is your employer planning for you to work full days at home?**

**Sample:** Data are from all SWAA waves, covering August 2020 to April 2024. The sample includes all respondents who responded to the relevant survey and have work-from-home experience during the pandemic. For the employer plans series, we exclude respondents who report having no employer. We impute September 2023 data as the average between August and October due to data quality issues.

N = 155,505 (employer plans, able to work from home)

N = 167,197 (worker desires, able to work from home)
Responses to the questions: As the pandemic ends, how often would you like to have paid workdays at home? For each day last week, did you work a full day (6 or more hours), and if so where?

Sample: Data are from the January to April 2024 SWAA waves. The sample includes full-time wage and salary employees (i.e. who worked 5 or more days during the survey reference week) who have work-from-home experience during the pandemic and pass the attention-check questions. Numbers for "5 days per week" in the right chart include responses for 6 or 7 full days worked from home. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match Current Population Survey on age, sex, education, and earnings.
Working from Home is Most Prevalent in the Tech, Finance, and Professional and Business Services Sectors

Current working from home: All wage and salary employees

Responses to the question:
- For each day last week, did you work a full day (6 or more hours), and if so where?

Sample: Data are from the November 2023 to April 2024 SWAA waves. The sample includes all wage and salary employees who pass the attention-check questions. We exclude mining due to insufficient observations and agriculture to focus on non-farm jobs. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match Current Population Survey on age, sex, education, and earnings.

N = 22,034
By Spring of 2024: 13% of Full-Time Employees Were Fully Remote, 61% Were Full-Time on Site, and 27% Were in a Hybrid Arrangement

Source: Responses to the questions:
- For each day last week, did you work a full day (6 or more hours), and if so where?

Notes: We compute the percent of full-time (i.e. work 5+ days/week) wage and salary employees who either i) worked all their days on business premises; ii) worked some days on business premises and some days at home; or iii) worked all all days at home during the survey’s reference week. Then we show the percentage for each group. The sample covers the January to April 2024 waves of the SWAA. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells.

N = 13,387
For Employees that Can Work from Home, the Most Common Practice is Hybrid

Source: Responses to the questions:
- For each day last week, did you work a full day (6 or more hours), and if so where?

Notes: We compute the percent of full-time (i.e. work 5+ days/week) wage and salary employees who are able to work from home and either i) worked all their days on business premises; ii) worked some days on business premises and some days at home; or iii) worked all all days at home during the survey’s reference week. Then we show the percentage for each group. We infer that somebody is able to work from home if they currently do so 1+ days per week, or did so at some point since the start of COVID. The sample covers the January to April 2024 waves of the SWAA. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in 2019 or 2021 to match CPS shares by age-sex-education-earnings cells. 

N = 9,357
Workers In Their 50s and 60s Are Fully Onsite More Often Than Younger Workers

Source: Responses to the questions:
- For each day last week, did you work a full day (6 or more hours), and if so where?

Notes: For each age group, we compute the percent of full-time (i.e. work 5+ days/week) wage and salary employees who either i) worked all their days on business premises; ii) worked some days on business premises and some days at home; or iii) worked all days at home during the survey’s reference week. Then we show the percentage for each group. The sample covers the January to April 2024 waves of the SWAA. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells. N = 13,387
Information, Finance & Insurance, and Prof. & Business Services Have The Largest Share of Hybrid and Remote Workers

Source: Responses to the questions:
- For each day last week, did you work a full day (6 or more hours), and if so where?

Notes: For each industry group, we compute the percent of full-time (i.e. work 5+ days/week) wage and salary employees who either i) worked all their days on business premises; ii) worked some days on business premises and some days at home; or iii) worked all days at home during the survey’s reference week. Then we show the percentage for each group. The sample covers the January to April 2024 waves of the SWAA. We re-weight the sample of US residents aged 20 to 64 earning $10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells. We exclude agriculture, construction, mining, and other personal services, the latter two due to insufficient observations. N = 13,108
66% of Workers use an office at least once per month, so the future of work is still linked to offices.

How often do you work in an office space?

All respondents

Responses to the Question:
- How often do you work in an office space?

Notes: The sample includes employed SWAA respondents who participated in the February 2024 wave, weighted to match the US population by age-sex-education-earnings cells.

N=4,026.
Quality, ease of travel, and equipment are the top three features of an office, according to workers

When you work in an office, how important are the following?
Please choose up to 3 top factors

- **Quality of office space**: 58.8%
- **Ease of traveling to/from**: 53.2%
- **Equipment in the office**: 52.3%
- **Location - nearby restaurants, shopping.**: 34.4%
- **Lunch, refreshments in the office**: 32.4%
- **Other amenities, e.g. gym ping-pong**: 11.9%

Responses to the question:
- *When you work in an office, how important are each of the following? Please choose up to 3 top factors.*

Source: The sample includes employed SWAA respondents who participated in the February 2024 wave and work in an office at least occasionally. The height of each bar is the share of people who We re-weight the raw sample to match the US population by age-sex-education-earnings cells.

**N = 2,920.**
In offices, employees split their time doing individual work and meeting others.

**Fully in-person office workers:**
When you work at your employer's site, how much of your workday consists of in-person meetings/events?

<table>
<thead>

**Responses to the questions:** For each day last week did you work a full day (6 or more hours) and if so where? When you work at your employer’s site, how much of your workday is typically filled with in-person meetings and events?

**Notes:** The sample includes employed SWAA respondents who participated in the February 2024 wave and work in an office at least occasionally. The left chart focuses on persons who had no work-from-home days in the week prior to the survey. The right chart focuses on those who had at least one work-from-home day and at least one in-person day.

N=1,321 (left). N = 1,020 (right).
