www.wfhresearch.com

The Survey of Working Arrangements and Attitudes

- Monthly online survey since May 2020, >200,000 observations to date.
- We design the survey instrument.
- Target population: U.S. residents, 20-64, who earned \geq \$10K in 2019 (\geq \$20K in early survey waves). From January to March 2022, we transitioned to earned \geq \$10K in the prior year. As of July 2023, we also now developed a dataset for 2022 and later that does not impose an earnings requirement.
- The SWAA is fielded by market research firms that rely on wholesale aggregators (e.g., [Lucid](#)) for lists of potential survey participants.
- After dropping “speeders” (~16% of sample), we re-weight to match 2010-2019 CPS worker shares in age-sex-education-earnings cells. Dropping those who fail attention checks (roughly another 12%) sharpens some results.
- Median response time: 7 to 12 minutes, after dropping speeders
- Results, micro data, survey instruments, and more are freely available at www.WFHresearch.com.

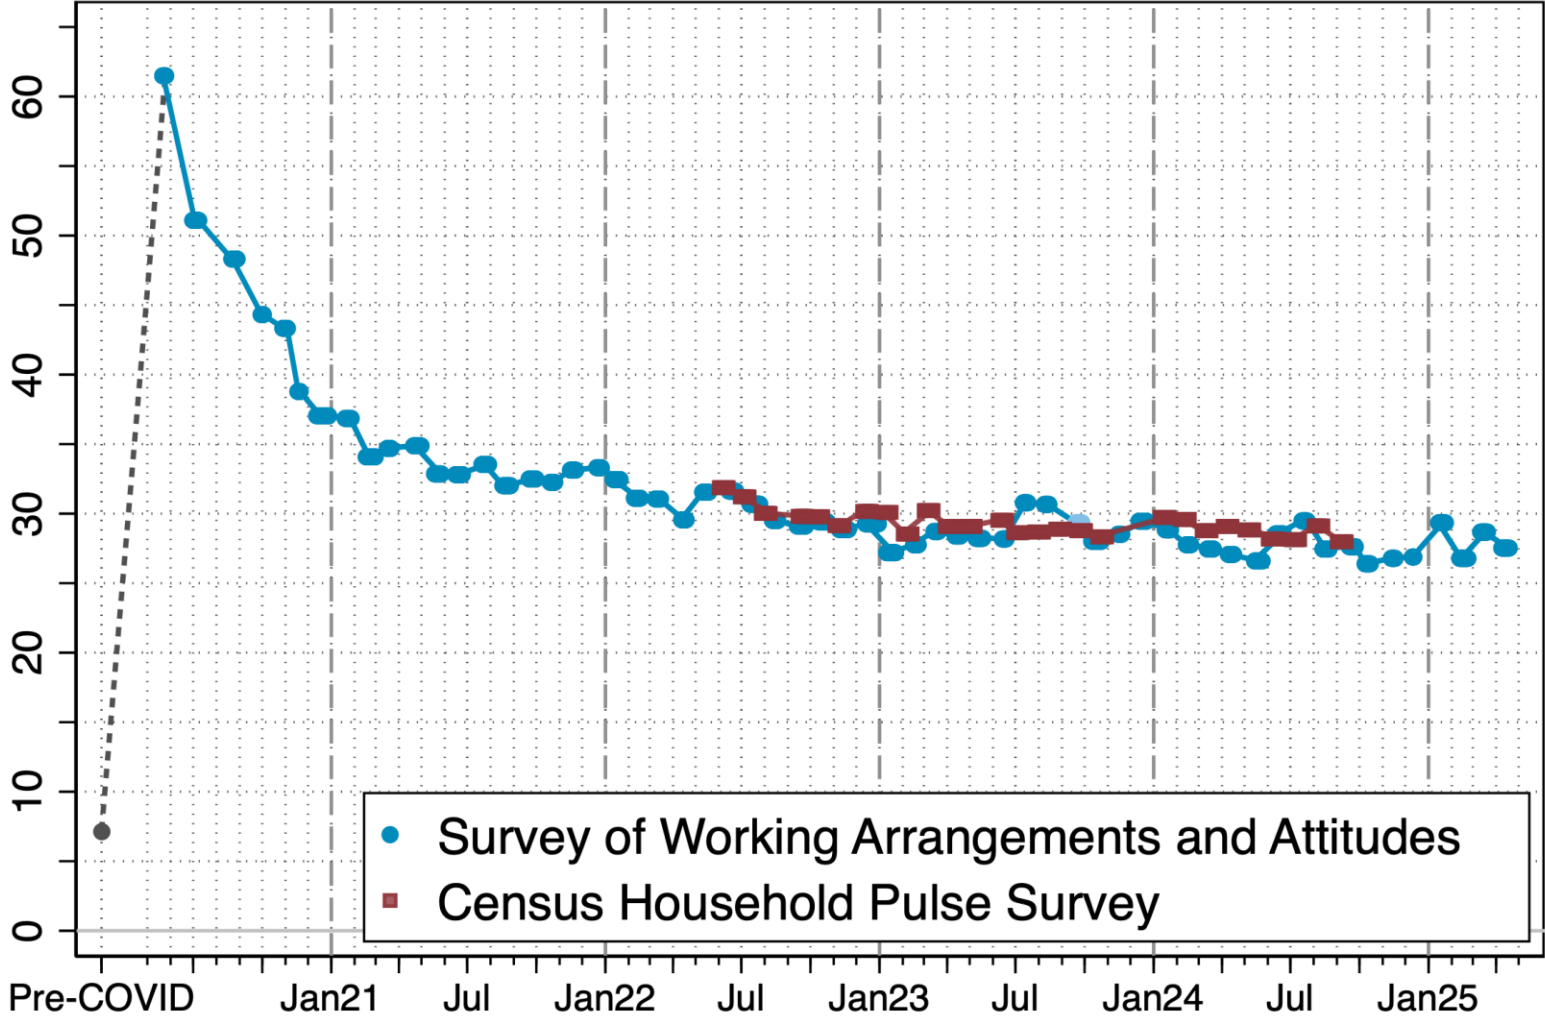

Representativeness

- By design, we focus on persons who exhibit some attachment to the workforce, as evidenced by prior earnings. When noted, some results using 2022 and later data do not impose an earnings requirement.
- No respondents are recruited based on an interest in our topics.
- Since respondents take the survey using a computer, smartphone, iPad or like device, we miss people who never use such devices.
- Before re-weighting, the SWAA under samples the less educated, particularly those who did not finish high school.
- Even after re-weighting, we may over sample those who are more tech and internet savvy, especially among the least educated.

About 27% of Paid Days in the US in April 2025 Were Work-From-Home Days

Percentage of paid full days worked from home

- Source:** Responses to the questions:
- **Currently (this week) what is your work status?** (SWAA)
 - **For each day last week, did you work a full day (6 or more hours), and if so where?** (SWAA)
 - **In the last 7 days, have you...teleworked or worked from home?** (HHP)

Notes: For each wave, we compute the percent of paid full days worked from home in the SWAA and Household Pulse Survey (HHP) and plot it on the vertical axis. The horizontal-axis location shows when the survey was in the field. The pre-COVID figure is from the 2017-2018 American Time Use Survey. SWAA: Before November 2020, we asked the first question above. Since November 2021, we have asked the second question. From November 2020 to October 2021, we back-cast responses to the current question using a regression model based on current-question responses and another question (not shown). We re-weight the sample of US residents aged 20 to 64 earning \$10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells. HHP: We focus on individuals aged 20 to 64 with household incomes above \$25,000 per year. We assign 30% of days WFH if the respondent did so for “for 1-2 days;” 70% if they did so “for 3-4 days;” 100% if “5 or more days;” and 0 for “No.”

N = 235,624 (SWAA) N = 923,587 (HHP)

The Pandemic Permanently Increased WFH, Equivalent to Almost 40 Years of Pre-Pandemic Growth

Full Days Worked at Home, Percent of Paid Workdays

Source: Responses to the questions:

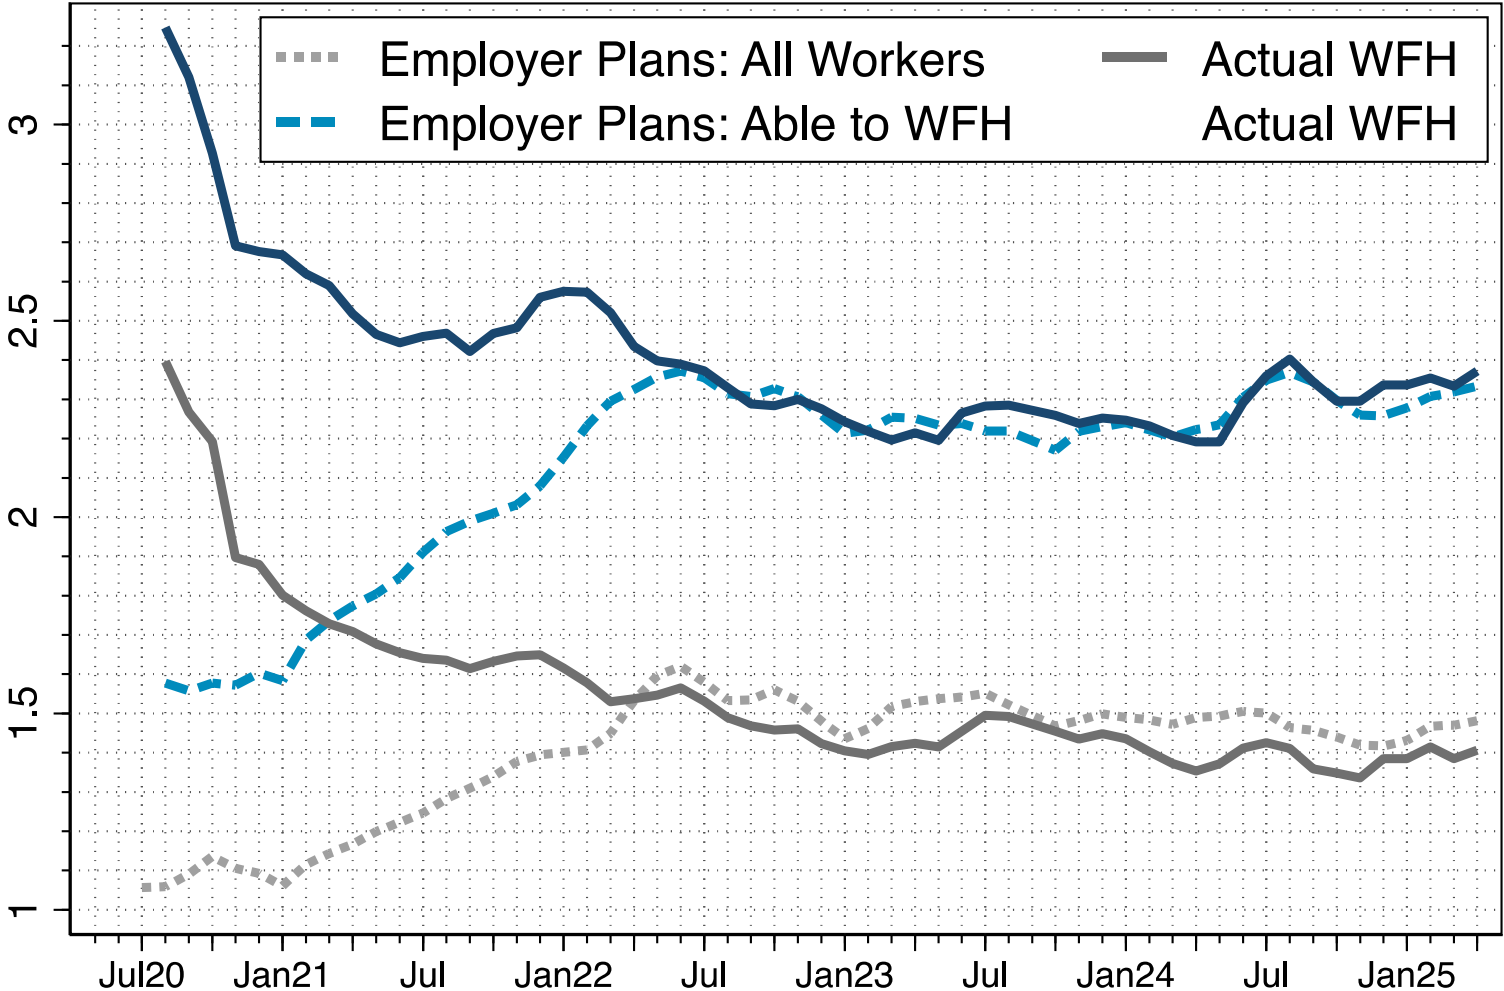

- In their time diary the respondent listed the activity "Paid work at home" for 6 or more hours. (AHTUS)
- How did this person usually get to work last week? (ACS)
- For each day last week, did you work a full day (6 or more hours), and, if so, where? (SWAA)

Notes: For each dataset, we compute the percent of working individuals who worked full days at home during the survey's reference period. For the AHTUS and ACS, if an individual reports usually working from home, we mark them as working from home 100% of the time. In SWAA we compute the percent of full paid days at home to account for a hybrid work schedule, and calculate monthly averages. We report those monthly values in 2020 and combine them into yearly averages from 2021 onwards. Then we plot each percentage on the vertical axis. We re-weight the sample of US residents aged 20 to 64 earning \$20,000 or more in 2019 dollars to overall population shares. We impute the September 2023 data value as the average of August and October due to data quality issues.

Employer Plans for WFH Trend Near 2.3 Days per Week for Persons Able to Work From Home

Average Days per Week Working From Home

- Responses to the questions:
- Looking one year ahead, how often is your employer planning for you to work full days at home?
 - For each day last week, did you work a full day (6 or more hours), and if so where? (November 2021 and later) **Currently (this week)** what is your work status? (Before November 2021)

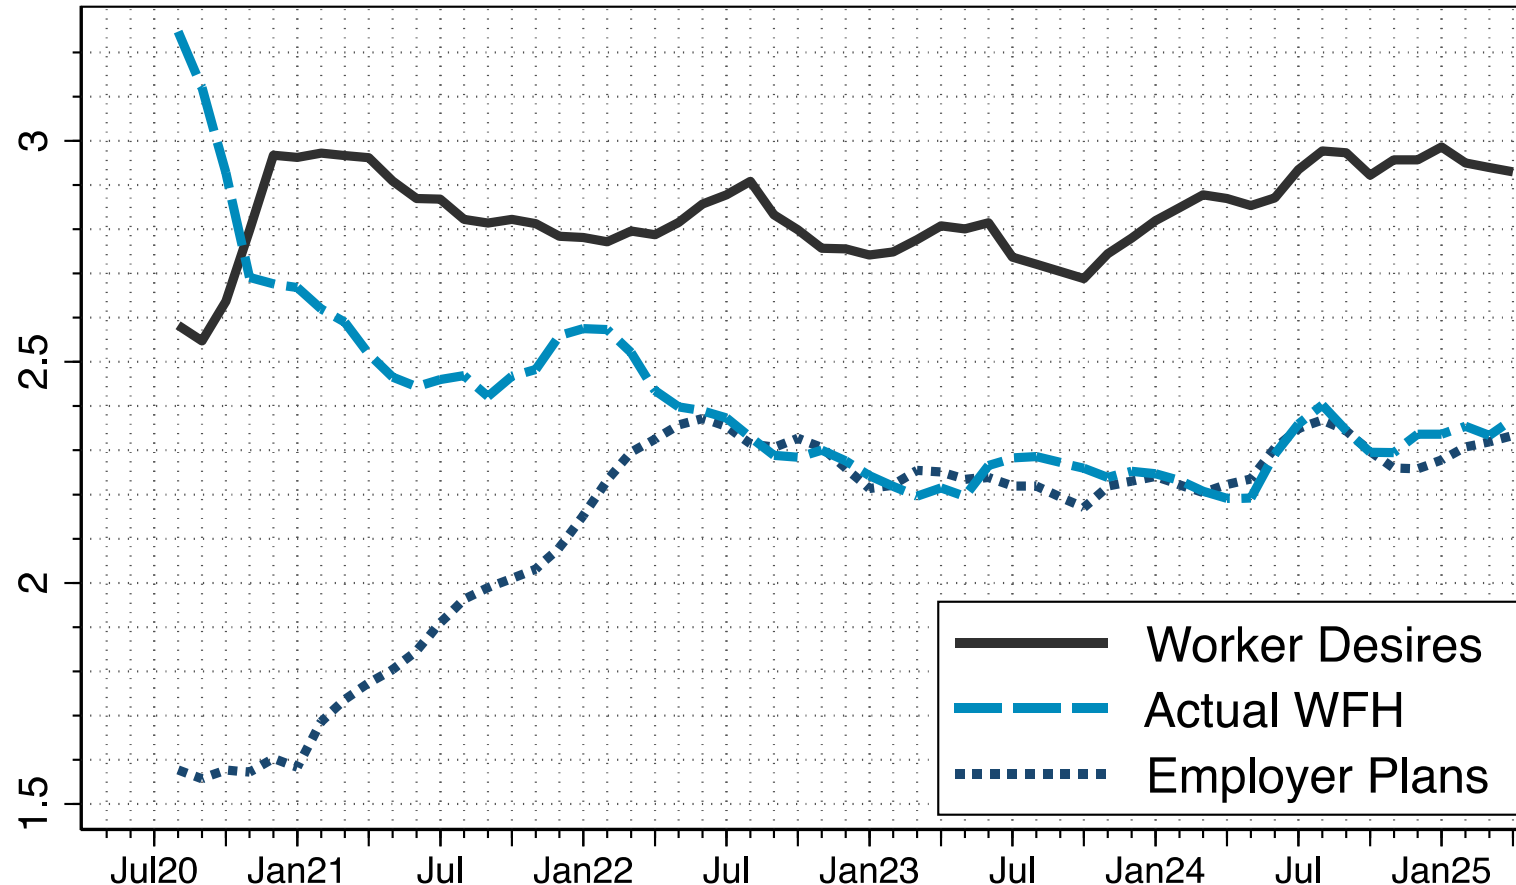

Sample: Data are from all SWAA waves, covering July 2020 to April 2025. The sample includes all respondents who reported their employer’s plans for WFH as the pandemic ends, or who worked the prior week (“All workers” series), but the blue-colored series labeled “Able to WFH” restrict attention to workers who have work-from-home experience in 2020 or later. We re-weight the sample of US residents aged 20 to 64 earning \$10,000 or more in a prior year to match Current Population Survey on age, sex, education, and earnings. We impute September 2023 data as the average between August and October due to data quality issues.

N = 276,198 (plans, all respondents) and 194,645 (plans, able to work from home), N = 240,567 (actual, all respondents), N = 171,726 (actual, able to WFH)

The Gap Between How Much Employees Want to Work from Home and Employer Plans Fluctuates Near 0.6 Days

Average Days per Week Working From Home:
Desired, Actual, and Employer Plans for 1+ Years Ahead

Sample: Workers able to work from home

Responses to the questions:

- Looking one year ahead, how often would you like to have full paid days at home?
- Looking one year ahead, how often is your employer planning for you to work full days at home?

Sample: Data are from all SWAA waves, covering August 2020 to April 2025. The sample includes all respondents who responded to the relevant survey and have work-from-home experience in 2020 or later. For the employer plans series, we exclude respondents who report having no employer. We impute September 2023 data as the average between August and October due to data quality issues.

N = 194,645 (employer plans, able to work from home)

N = 210,005 (worker desires, able to work from home)

N = 171,726 (actual, able to work from home)

Employers Offer Fewer Fully Remote Jobs and More Fully Onsite Jobs Than Employees Want

Worker desired amount of post-COVID WFH days

Sample: Full-time wage and salary employees who are able to WFH. N = 8698

Current amount of WFH days

Sample: Full-time wage and salary employees who are able to WFH. N = 8349

Responses to the questions: *Looking one year ahead*, how often would you *like to* have paid workdays at home? *For each day last week, did you work a full day (6 or more hours), and if so where?*

Sample: Data are from the December 2024 to April 2025 SWAA waves. The sample includes full-time wage and salary employees (i.e. who worked 5 or more days during the survey reference week) who have work-from-home experience during the pandemic and pass the attention-check questions. Numbers for “5 days per week” in the right chart include responses for 6 or 7 full days worked from home. We re-weight the sample of US residents aged 20 to 64 earning \$10,000 or more in a prior year to match Current Population Survey on age, sex, education, and earnings.

Working from Home is Most Prevalent in Finance, Tech, and Professional and Business Services Sectors

Current working from home: All wage and salary employees

Responses to the question:

- For each day last week, did you work a full day (6 or more hours), and if so where?

Sample: Data are from the November 2024 to April 2025 SWAA waves. The sample includes all wage and salary employees who pass the attention-check questions. We exclude mining due to insufficient observations and agriculture to focus on non-farm jobs. We re-weight the sample of US residents aged 20 to 64 earning \$10,000 or more in a prior year to match Current Population Survey on age, sex, education, and earnings.

N = 21,869

By Spring 2025: 13% of Full-Time Employees Were Fully Remote, 60% Were Full-Time on Site, and 27% Were in a Hybrid Arrangement

Working Arrangements

Source: Responses to the questions:

- *For each day last week, did you work a full day (6 or more hours), and if so where?*

Notes: We compute the percent of full-time (i.e. work 5+ days/week) wage and salary employees who either i) worked all their days on business premises; ii) worked some days on business premises and some days at home; or iii) worked all all days at home during the survey's reference week. Then we show the percentage for each group. The sample covers the January to April 2025 waves of the SWAA. We re-weight the sample of US residents aged 20 to 64 earning \$10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells.

N = 14,095

For Employees that Can Work from Home, the Most Common Practice is Hybrid, with Fully On Site Close Behind

Working Arrangements of Those Able to WFH January to April 2025

Source: Responses to the questions:

- *For each day last week, did you work a full day (6 or more hours), and if so where?*

Notes: We compute the percent of full-time (i.e. work 5+ days/week) wage and salary employees who are able to work from home and either i) worked all their days on business premises; ii) worked some days on business premises and some days at home; or iii) worked all all days at home during the survey's reference week. Then we show the percentage for each group. We infer that somebody is able to work from home if they currently do so 1+ days per week, or did so at some point since the start of COVID. The sample covers the January to April 2025 waves of the SWAA. We re-weight the sample of US residents aged 20 to 64 earning \$10,000 or more in 2019 or 2021 to match CPS shares by age-sex-education-earnings cells.

N = 9,599

Workers In Their 50s and 60s Are Fully On Site and Fully Remote More Often Than Younger Workers

Working Arrangements by Age January to April 2025

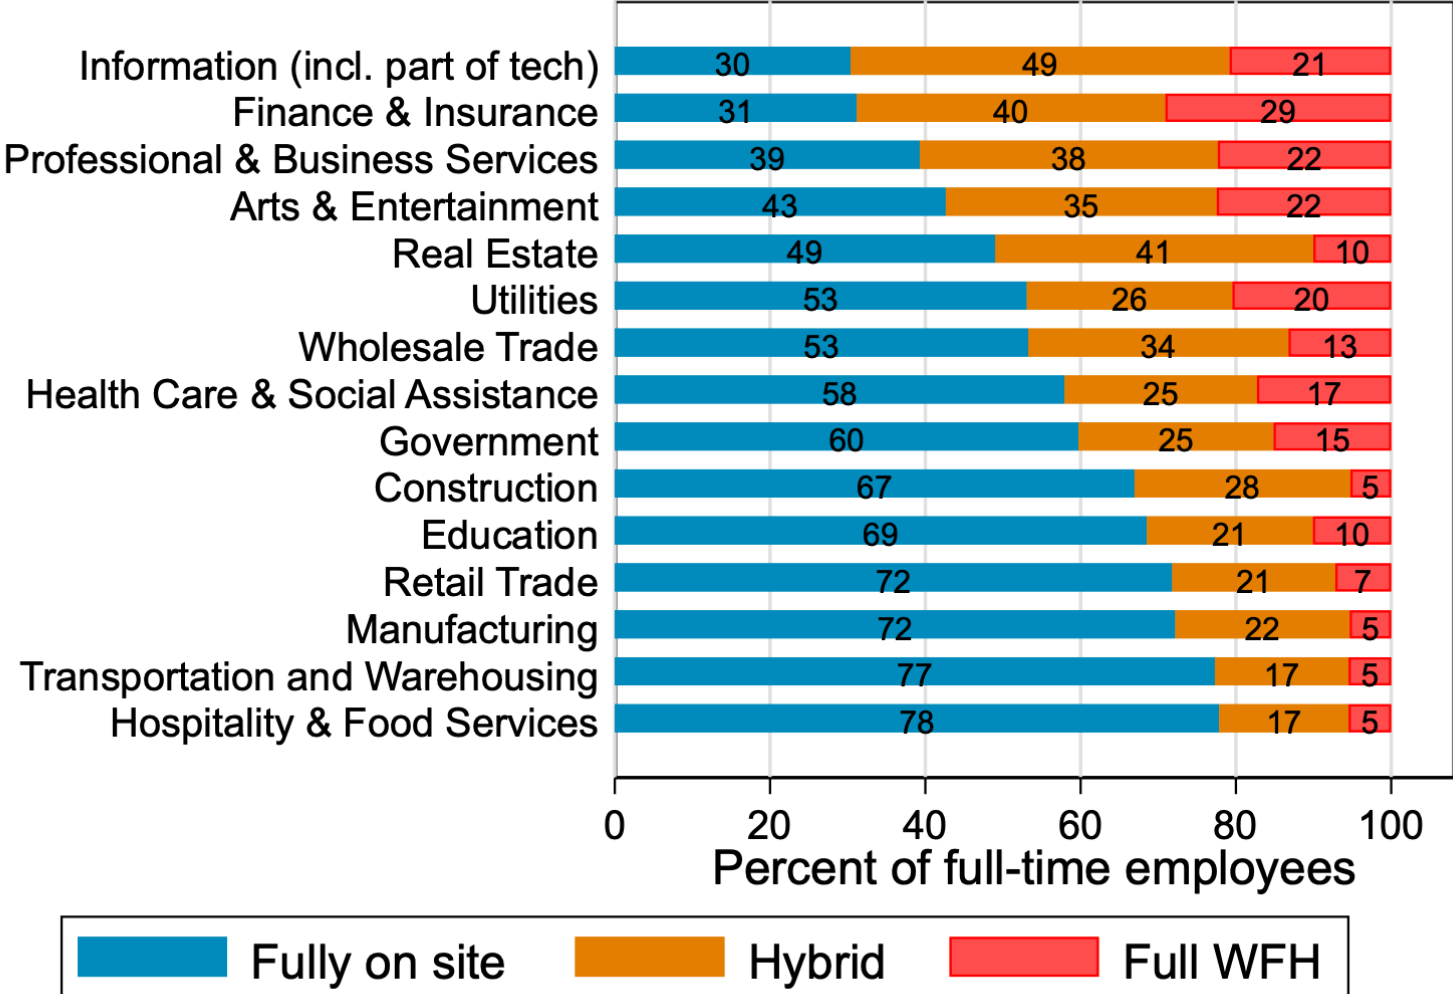

Source: Responses to the questions:
- *For each day last week, did you work a full day (6 or more hours), and if so where?*

Notes: For each age group, we compute the percent of full-time (i.e. work 5+ days/week) wage and salary employees who either i) worked all their days on business premises; ii) worked some days on business premises and some days at home; or iii) worked all all days at home during the survey’s reference week. Then we show the percentage for each group. The sample covers the January to April 2025 waves of the SWAA. We re-weight the sample of US residents aged 20 to 64 earning \$10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells.
N = 14,095

Information, Finance & Insurance, and Prof. & Business Services Have The Largest Share of Hybrid and Fully Remote Workers

Working Arrangements by Industry January to April 2025

Source: Responses to the questions:
 - For each day last week, did you work a full day (6 or more hours), and if so where?

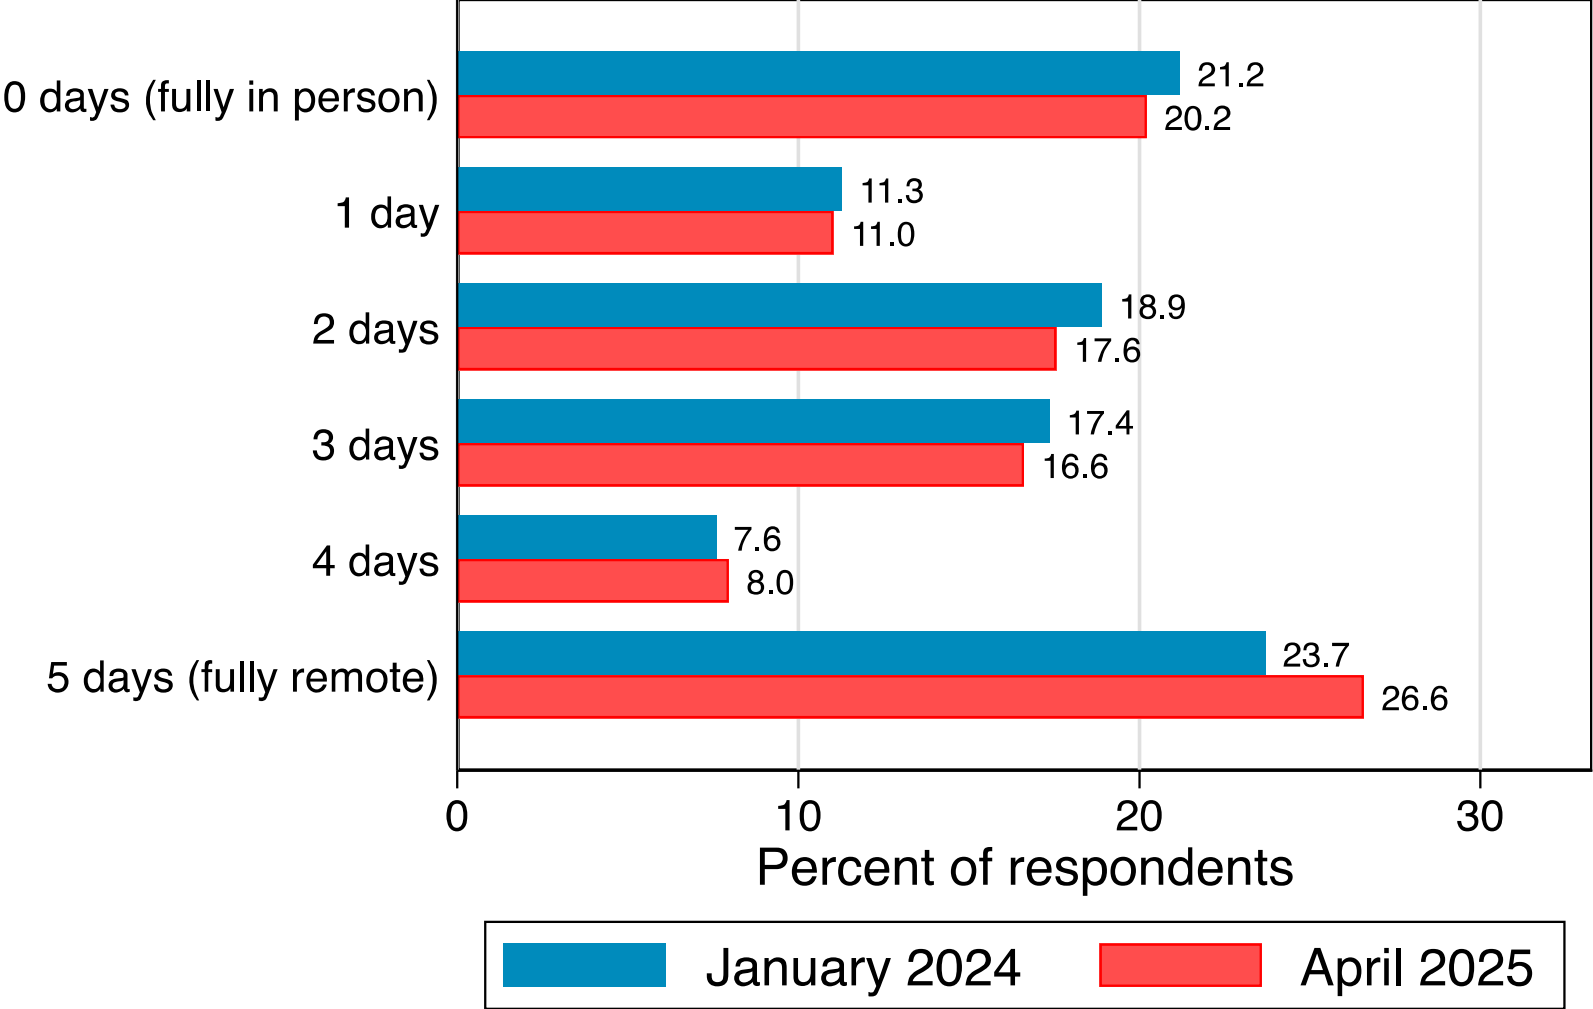

Notes: For each industry group, we compute the percent of full-time (i.e. work 5+ days/week) wage and salary employees who either i) worked all their days on business premises; ii) worked some days on business premises and some days at home; or iii) worked all all days at home during the survey’s reference week. Then we show the percentage for each group. The sample covers the January to April 2025 waves of the SWAA. We re-weight the sample of US residents aged 20 to 64 earning \$10,000 or more in a prior year to match CPS shares by age-sex-education-earnings cells. We exclude agriculture, construction, mining, and other personal services, the latter two due to insufficient observations.

N = 13,783

Slightly More SWAA Respondents Say Fully Remote Work Would Be Best for Their Mental Health, Compared to Early 2024

If you worked 5 days/week, how many WFH days/week would be best for your mental health?

Responses to the Question:
 - If you worked 5 days per week, how many work-from-home days per week would be best for your mental health?

Notes: The figure shows the distribution of responses to the question among SWAA respondents who were in the labor force in January 2024 and April 2025. Only 50% of respondents saw this question in April 2025. We reweight the raw sample of US residents aged 20-64 who earned at least \$10,000 in the prior year to match the Current Population Survey in cells defined by age x sex x education x earnings. **N = 4,177 (January 2024), 2,307 (April 2025).**

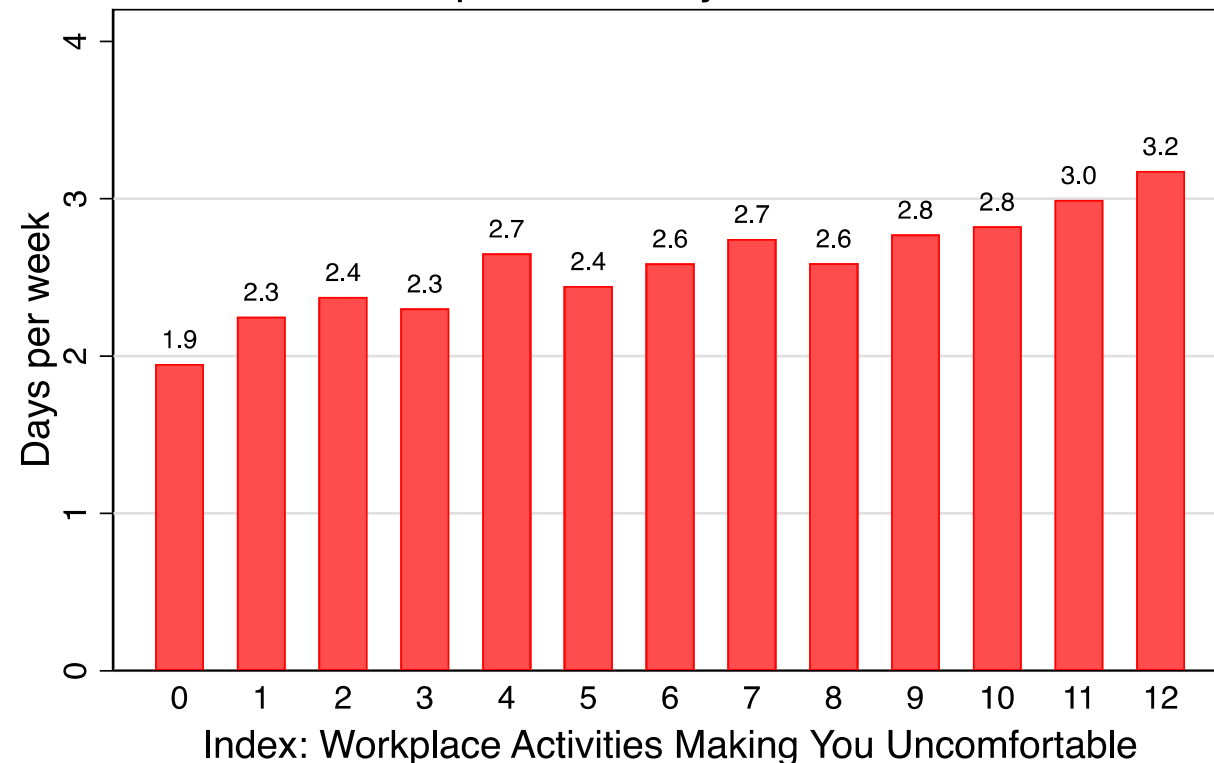

Respondents With Social/Psychological Discomfort at the Workplace Say More WFH Would be Best for Their Mental Health

If you worked 5 days/week, how many WFH days/week would be best for your mental health?

Looking one year ahead, how often would you like to have paid workdays at home?

Responses to the Questions: *If you worked 5 days per week, how many work-from-home days per week would be best for your mental health? The following items are about activities you might do during a typical day. Do you **currently feel personally uncomfortable** doing these activities? [Response options: Eating food in a common space (breakroom, cafeteria); Working under fluorescent light; Using a public restroom; Sharing a common workspace like an open floor plan office; Participating in small talk with colleagues; Working in crowded spaces]*

Notes: We create an index for how uncomfortable the respondent feels with workplace activities, adding 2 for each activity that makes them “very uncomfortable” and 1 for each activity that makes them “a little uncomfortable.” Then we compute the average amount of WFH they think is best for mental health (left) and the average number of desired WFH days per week (right), as a function of the index. Responses come from the April 2025 SWAA wave focusing on respondents who are in the labor force. We reweight the raw sample of US residents aged 20-64 who earned at least \$10,000 in the prior year to match the Current Population Survey in cells defined by age x sex x education x earnings. **N = 2,307.**

Globally, Work-From-Home Levels Have Stabilized Since 2023

Responses to the Question:

- *For each day last week, did you work 6 or more hours, and if so where?*

Note: The sample includes college-educated workers in 22 countries surveyed in 2022, 2023 and 2024/25.

Source: Global Survey of Working Arrangements.

N=40,751

In 2024-5 Work From Home is More Common in North America and Europe than Asia Among College-Educated Workers

Responses to the Question:

- For each day last week, did you work 6 or more hours, and if so where?

Note: The sample includes college-educated in 40 countries surveyed between November 2024 and February 2025.

Source: Global Survey of Working Arrangements.
